Professional Summary

Results-driven SDE and Tech Consultant specializing in Scalable System Design, **RAG Architectures**, and Enterprise Infrastructure. Track record designing applications architectures for national corporate management platforms, automating engineering pipelines to cut operational overhead by 150 hours/month, and optimizing backends to boost latency by 40%. Expert proficiency across **Python**, **SQL**, and DevOps workflows (**AWS/GCP**).

Education

Model Institute of Engineering and Technology (Autonomous)
Bachelor of Technology in Computer Science; CGPA: 8.0/10

Jammu, J&K
2022 – 2026

Experience

KPMG India

Aug 2025 – Present

Technology & Product Management Advisory Intern (Digital Government)

Delhi

- Co-designed applications architecture blueprints and relational structural roadmaps for the Ministry of Corporate Affairs (**MCA21 system**) and the **Corporate Data Management (CDM)** framework.
- Engineered a high-throughput verification engine using complex **SQL** logic to map data compliance lineages for 200K+ enterprise corporate entities.
- Spearheaded a **Python** automation suite for real-time log evaluations, eliminating 150 manual hours/month and capturing \$5,000/month in operational savings.
- Orchestrated an analytics dashboard processing 1TB+ financial data using **SQL/Tableau**; led a cross-functional team of 4 to ship a zero-bug client portal.

CRIE MIET

Apr 2024 – Jul 2025

Software Development Engineer Intern

Jammu, J&K

- Recognized as #1 Intern (Top 1% of 400+ cohort) to lead development on the flagship 'Chat-Pi360' platform, owning the complete SDLC from architecture design to production release.
- Engineered a high-concurrency enterprise RAG Chatbot using **LLaMA 3** and **Docker**, supporting 100+ concurrent requests with stable sub-200ms latency.
- Optimized backend SQL execution speeds using a Sliding Window Protocol, decreasing peak server load by 60% while generating a 3x gain in throughput.
- Refactored legacy application architecture into decoupled **Flask Microservices**, increasing core API response velocities by 40% while sustaining a 99.9% uptime metric.

Projects

GST Compliance and Automation Platform | *Python, Flask, AWS Lambda, RAG*

Edge Deployment

- Built a scalable SaaS platform processing 50K+ legal invoices monthly via OCR/NLP; engineered asynchronous task architecture via **Celery/Redis** to decrease ingestion times by 70%.
- Deployed auto-scaling serverless microservices via **AWS Lambda**, minimizing runtime resource consumption to cut cloud architecture overhead by 45%.

Decentralized Voting System (Blockchain) | *Ethereum, Solidity, Web3.js, React*

Production Demo

- Architected a tamper-proof voting DApp on the Ethereum Goerli Testnet to safely secure 10K+ cryptographic records; optimized smart contract design in **Solidity** to lower gas fees by 30%.

Real-Time Semantic Segmentation | *TensorFlow Lite, OpenCV, Edge AI*

Open Source

- Fine-tuned highly optimized deep learning models onto mobile NPUs for 60 FPS edge inference; designed a robust offline-first caching structure that eliminated 500GB of cloud network transfers monthly.

Technical Skills

Languages: Python (Expert), C++, SQL, JavaScript (ES6+), Solidity, HTML5/CSS3, Bash Scripting

Frameworks: Flask, Django, React.js, FastAPI, TensorFlow, PyTorch, Node.js, Next.js

Cloud/DevOps: AWS (Lambda, EC2, S3), Google Cloud (GCP), Docker, Kubernetes, CI/CD, Terraform

Databases: PostgreSQL, MySQL, MongoDB, Redis, Pinecone (Vector DB), Firebase

Competencies: Enterprise Architecture, System Design, RAG, Microservices, REST APIs, Agile, Data Governance

Certifications

Professional Qualifications: Google Professional ML Engineer (Top 1% Scorer) · IBM AI Engineering Professional · HackerRank Gold (Python/SQL)
